

The Mission Critical Solution Provider

## Enterra E-learning Solutions

Enterra delivers E-Learning solutions to provide for learning and training programs via media such as CD-ROM, Internet, Intranet. Solutions allow for student registration, delivery and tracking of e-learning courses and content, testing, management of instructor-led training classes, featuring tools such as competency management, skills-gap analysis, succession planning, certifications, virtual live classes, and resource allocation (venues, rooms, textbooks, instructors, etc.). Solutions provide for a learner self-service, facilitating self-enrollment, and access to courses.

Enterra E-Learning is based on such development platforms, as Java EE based architecture and Microsoft .NET, and employs the use of a robust database back-end.

Businesses use online learning to provide cost-effective training to their employees, partners, and customers.

Enterra is incorporating increasingly sophisticated teaching approaches through technology such as educational animation in Flash MX that address the challenges of presenting dynamic content to learners.

Enterra provides for the K-12 online learning, which has grown recently from a spate of virtual schools and virtual charter schools combining new technology with old, to help producing detailed lesson plans.

Enterra E-Learning solutions are SCORM compliant allowing for scalable, reusable, sharable course content; discoverable learning content (enables interoperable repositories); the ability to find and move entire courses; Enterra support for SCORM conformant COTS products; and, the development of adaptive learning systems that can assemble content to meet the learner's needs "on the fly."

The Mission Critical Solution Provider

You will get a breakthrough in integrating best-of-breed learning methods with content development tools. Together, they result in easy, economical and transformational learning experiences.
